Stedman's Medical Dictionary 27th Edition

benzalkonium chloride (ben-zal-ko'ne-um)

A mixture of alkylbenzyltrimethylammonium chlorides in which the alkyls are long-chain compounds (C₈ to C₁₈); a surface-active germicide for many pathogenic nonsporulating bacteria and fungi. Aqueous solutions of this agent have a low surface tension, and possess detergent, keratolytic, and emulsifying properties that aid the penetration and wetting of tissue surfaces.
